TROJECTOR-3 lock

Auto-destruct Syringe

These special 3-part syringes are provided with additional safety hooks positioned alongside the piston. Once the injection is administered the piston is locked inside the barrel by two self-activating metal hooks. This special locking device cannot be evaded and makes further movement of the piston impossible and avoids reuse of the syringe.

Sizes: 0.05ml, 0.1ml, 0.5ml, 1ml, 2ml, 3ml, 5ml

TROJECTOR-3 safety

Safety Syringe

Due to the additional safety sleeve attached to the barrel the TROJECTOR-3 safety stands out from all usual syringes. After use the protective sleeve can be moved upwards until the needle is completely covered. The safety feature ensures safe disposal and prevents the user from needle-stick injuries and thus infection with transmissible diseases.

Sizes: 3ml, 5ml

FOR YOUR SAFETY

With **TROGE safety products** you meet the requirements of the German TRBA 250: Technical rules for biological substances to prevent users from injuries, for use in fields with high risk potential

For highest protection in well-accustomed and trusted quality of Troge Medical

TRO-VENOSET safety

Safety Perfusion Set

This safety perfusion set is provided with an additional needle protection. After use the protective cover can be pushed forwards to encase the needle and thus to avoid harm to the user or third persons. The product can be easily and safely disposed. Risk of injuries or inadvertent infection is reduced to a minimum.

Sizes: 18G - 27G

TRO-VENSITE safety

Safety I.V. Cannula

The special feature of our safety i.v. cannulas is the self-activating clip whose activation cannot be bypassed as it automatically covers the needle tip immediately after removal of the needle from the catheter. It ensures protection of the user from needle-stick injuries and inadvertent infection and makes reuse impossible.

Sizes: 18G - 24G

- Integrated safety feature
- Protection from needle-stick or cut injuries
- Prevents user from inadvertent infections
- User-friendly, safety mechanism requires no change in application

TRO-MICROCISION safety

Safety Surgical Scalpel

Our safety surgical scalpels are characterized by their special lock mechanism. The blade is covered by a protective shield which can be pushed backwards and locked in place during application. To prevent the user from cut injuries and for safe and easy disposal after use the shield can be pushed forwards again and completely locked (Safety lock).

Sizes: 10 - 60
